WATER ★ HEATERS

ENERGY STAR® Qualified Gas Water Heaters Available January 1, 2009

The average home spends about \$1,900 annually on energy bills. Heating and cooling accounts for as much as half of a home's energy use. The EPA provides important recommendations for energy-efficient equipment, including proper sizing, quality installation and maintenance, and other home improvement considerations to help you get the most out of the heating and cooling products you purchase, save energy, and save as much as 20% annually on your total energy costs.

Water heaters can help.

Whether you're replacing your current water heater or planning the installation of a water heater in a new home, choosing ENERGY STAR qualified products can contribute to a cleaner environment and help save money.

ENERGY STAR qualified products reduce greenhouse gas emissions by meeting strict energy efficiency guidelines set by the U.S. Environmental Protection Agency (EPA) and the U.S. Department of Energy (DOE).

Introducing ENERGY STAR qualified Gas Water Heaters made by U.S. Craftmaster®. U.S. Craftmaster® gas water heaters are equipped with an enhanced combustion system, and high temperature materials to meet the new ENERGY STAR requirements.

U.S. Craftmaster® gas water heaters leverage Flammable Vapor Ignition Resistant (FVIR) technology, offer flexible venting options, and operate smoothly, efficiently, and quietly. U.S. Craftmaster® gas water heaters are offered in 40-, and 50-gallon models. U.S. Craftmaster®, an ENERGY STAR partner.
